

Climate Visioning

Discussion Exercise (approximately 15 minutes)

Task Description

Ask the students to imagine a sustainable future society after a successful climate transition. What does the world look like then, and how did we get there? Let the students discuss in small groups and/or draw pictures of how the world can appear. Aspects to consider are for instance: How do we travel? How do we live? What energy sources do we use? What do we eat, and what do we consume?

Aim

The exercise contributes to creating hope and inspire action.
